Title: Report on Tutorials given at the Eye Tracking Research and Applications conference

Author: Marcus Nyström, Tutorial Chair

As a new part of the Eye Tracking Research and Applications (ETRA) conference, three tutorials took place at the Francis Marion Hotel in Charleston, SC, USA, March 14, 2016. The Tutorials covered Visualization of eye-tracking data, scanpaths, and eye data quality and attracted a total of 37 participants (18 regular, 19 PhD students, 27% female) from 10 different countries in North America, Europe, and Asia. Detailed tutorial-content can be found here: http://etra.fxpal.com/2016/tutorials/

The results of a survey sent out to the participants showed that the overall impression of the Tutorials was very good, 4.3 on a scale from 1 (terrible) to 5 (excellent, N = 30). Specific feedback was provided to teachers and organizers to improve future Tutorials to be held during ETRA 2018 and 2019, where the Tutorial budget will be incorporated into the main conference budget.

Funds were spent on lunches/coffee for the participants, rent for A/V, and reimbursement to the teachers for housing as well as a discounted registration fee for the teachers.

Funding requested: $8170

Funding spent: $7928
